### DFB Interband Cascade Lasers from 4600 nm to 5300 nm

**nanoplus single mode IC lasers**

nanoplus is the only manufacturer worldwide routinely providing single- and multi-mode lasers at any wavelength from 760 to 6000 nm. At wavelengths up to 14 µm, QCLs complete nanoplus’ laser portfolio.

Our IC lasers deliver single mode emission with well defined optical properties enabling a wide range of applications.

**nanoplus lasers** operate reliably in tens of thousands of installations worldwide, including chemical and metallurgical industries, gas pipelines, power plants, medical systems, airborne and satellite applications.

**key features**
- very high spectral purity
- narrow linewidth
- excellent reliability
- wide variety of packaging options
- customer-specific designs available

**application areas**
- high performance gas sensing for process and environmental control
- precision metrology
- spectroscopy
- space technology

**nanoplus lasers** with excellent performance are specifically designed and characterized to fit your needs. This data sheet summarizes typical properties of nanoplus DFB lasers in the range from 4600 nm to 5300 nm. In this wavelength regime e. g. CO, O₃, CH₃O, NH₃ and NOₓ can be detected with particularly high sensitivity, since the detection sensitivity typically increases at long wavelengths. Overleaf data for DFB lasers optimized for NOₓ detection is shown as an example.

**laser packaging options**

- TO66 with TEC and NTC, sealed
- other packaging options will follow soon, or may be discussed on request

**On request**, lasers with specifically optimized properties, such as higher output power, are available.

For dimensions and accessories, please see www.nanoplus.com
nanoplus DFB ICL at 5255 nm

A wide variety of gas molecules exhibit characteristic absorption lines in the near infrared. DFB lasers emitting at 5255 nm are e. g. suited for highly sensitive detection of small NOx concentrations. For this application, highly stable laterally and longitudinally single mode lasers are required. This data sheet reports performance data of nanoplus DFB lasers at this wavelength. Similar performance data are obtained in the entire wavelength range from 4600 nm to 5300 nm.

For examples of performance data of nanoplus lasers in other wavelength ranges, please see www.nanoplus.com or contact sales@nanoplus.com.

In many applications, temperature and / or current variations are used to adjust the laser emission precisely to the target wavelength.
